Assignment – V

Estimated five-week prevalence of symptoms

Source: ONS Coronavirus Infection Survey, 26 April 2020 to 6 March 2021

Q. What does the graph exactly show?

A. The graph shows the persistence of symptoms that stay with a group of individuals who were infected by Covid-19 for the first five weeks. From the graph, we can see that the most prevalent symptom is fatigue, affecting 1 in 8 people approximately. The least prevalent symptom is abdominal pain, affecting 1 in 42 people approximately.

Q. Which two symptoms are the most common in Covid-19 patients?

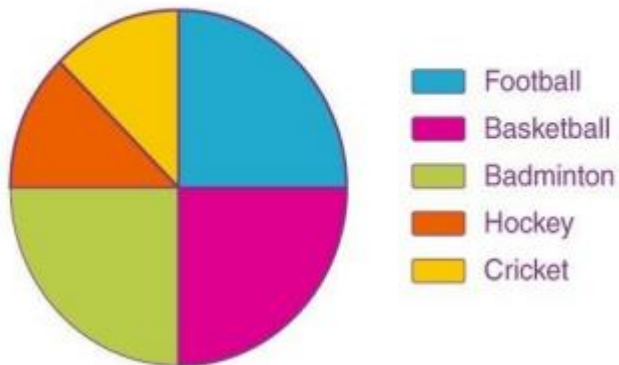

A. The most common symptom among the Covid-19 patients is fatigue, affecting 11.8% or 1 in 8 people and cough, affecting 10.9% or 1 in 9 people.

Q. Mention some home care remedies if confirmed with Covid-19.

A. A few home care remedies for someone who is confirmed to have Covid-19 is to isolate themselves, wear a triple layered mask to prevent the spread to others and treat it like they have a fever, lots of rest, fluids to drink and frequent temperature checks.
